

# Setting up SDL 2 on Mac OS X Yosemite

1. Download the OS X development libraries from the SDL Website:

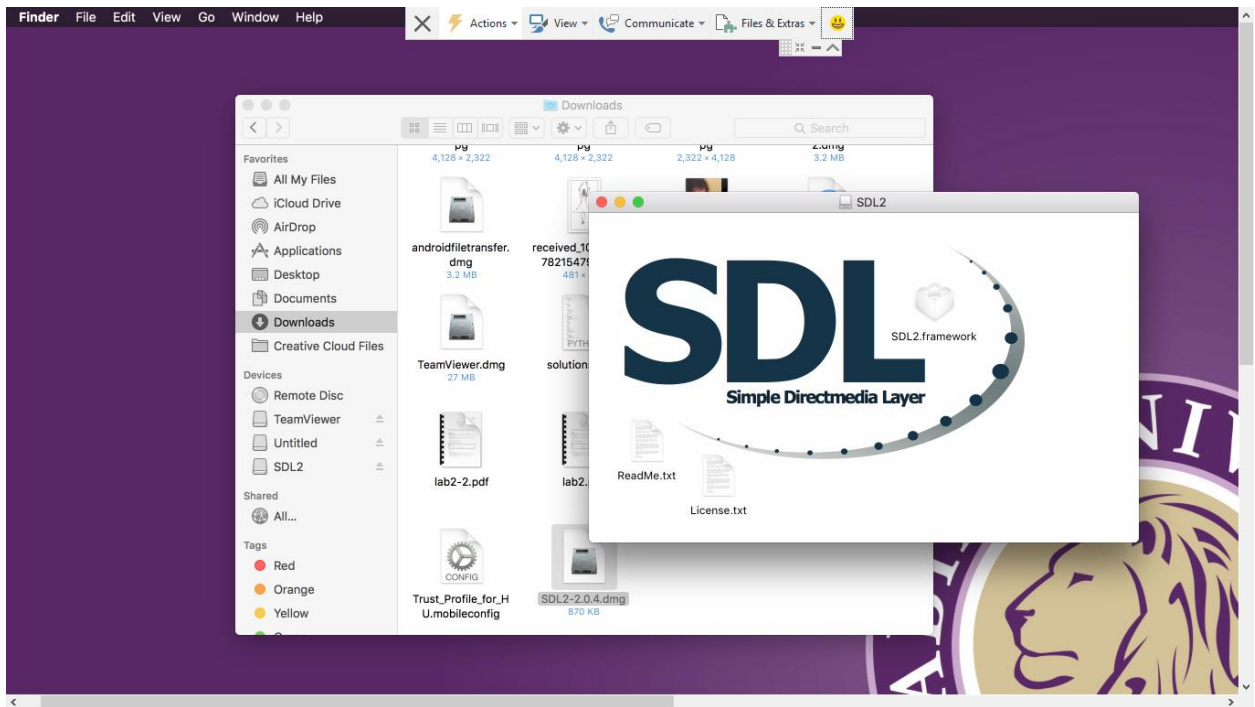

<https://www.libsdl.org/download-2.0.php#source>

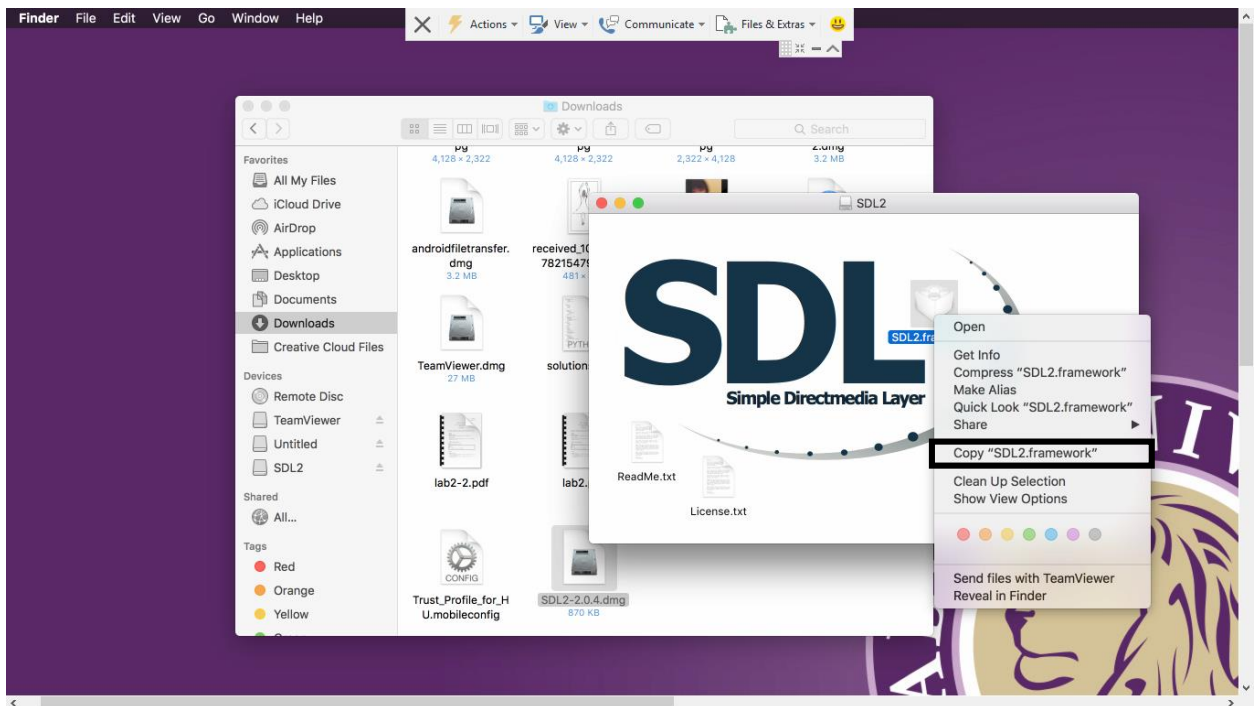

2. Double click on the downloaded SDL2 DMG file - **SDL2-2.0.4.dmg** to open it.

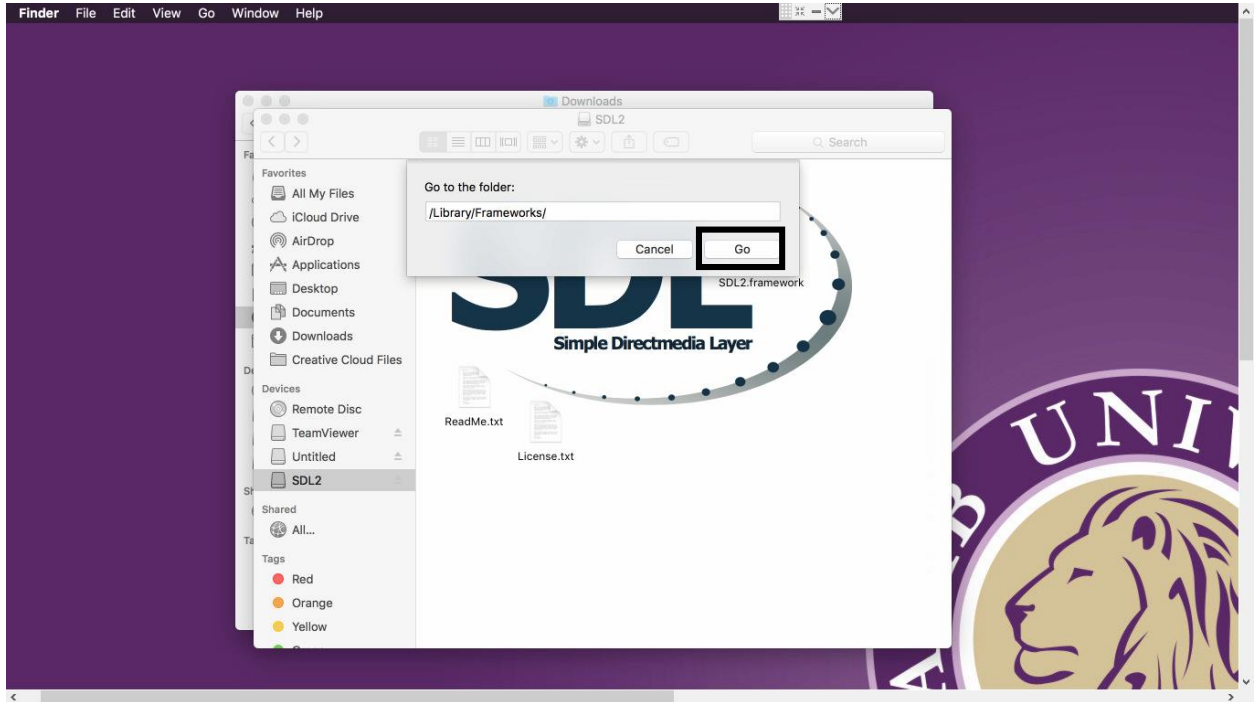

3. **SDL2-2.0.4.dmg** will open.

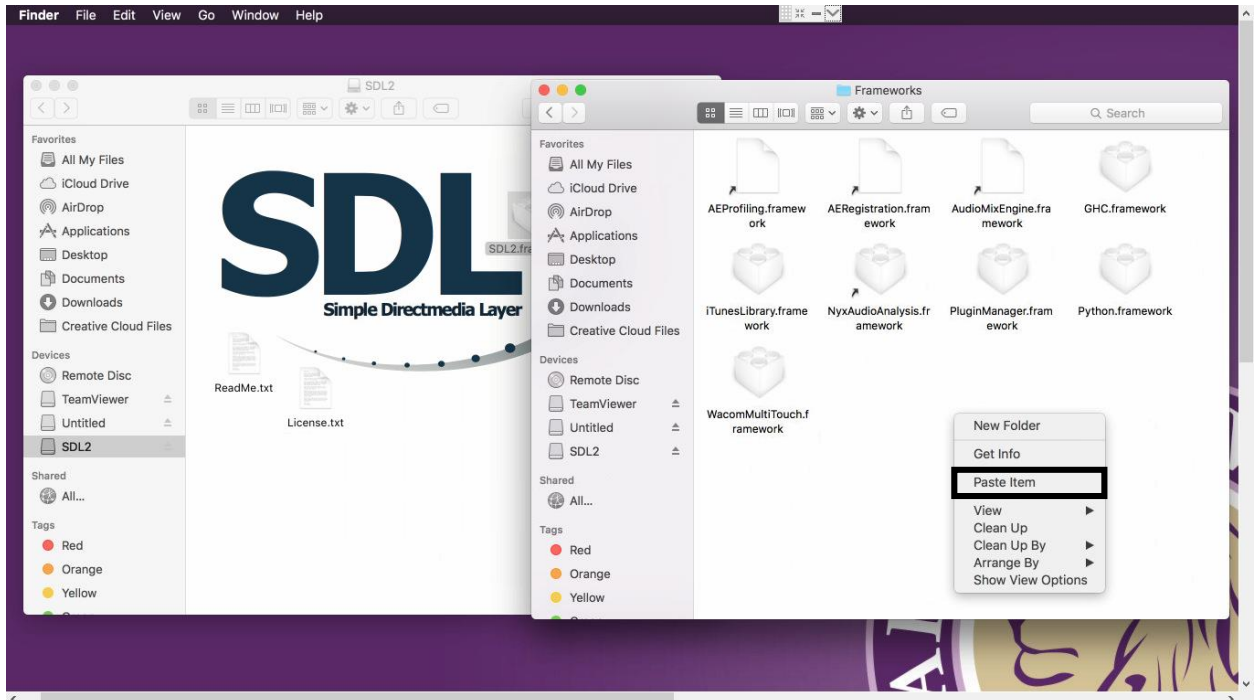

4. Copy **SDL2.framework** file. We need to paste it in **/Library/Frameworks**.

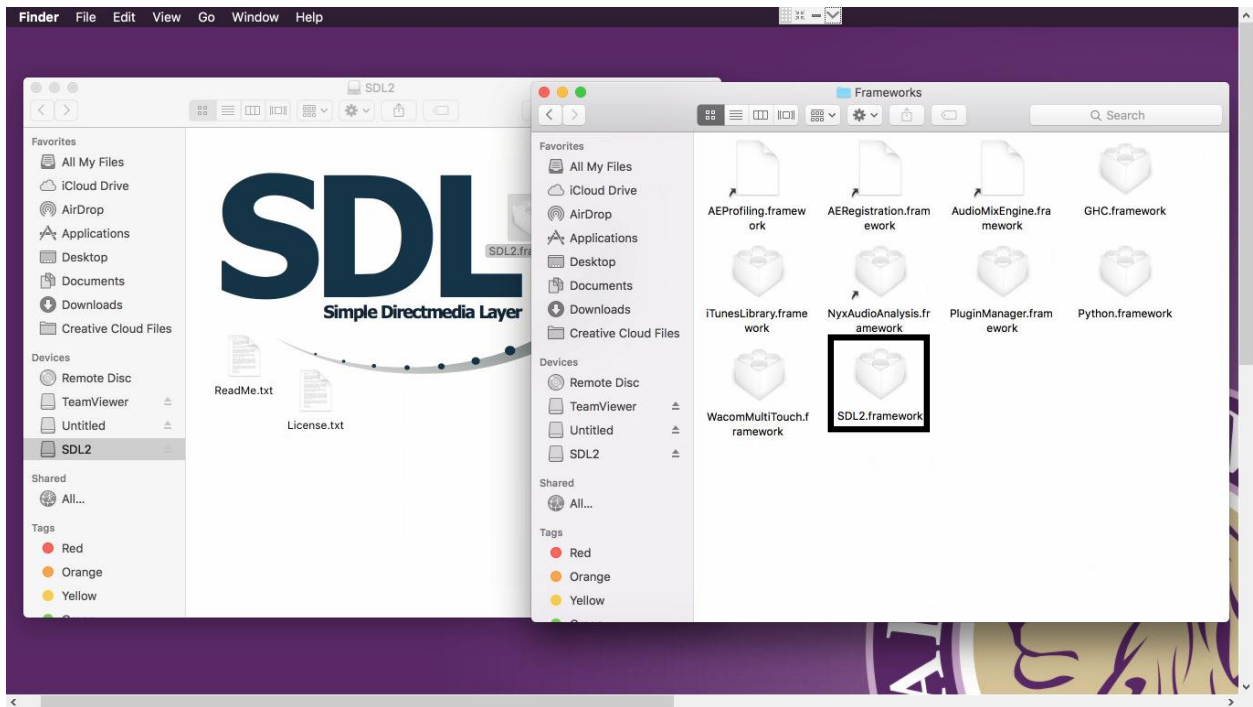

5. To go directly to a path in finder, press command+shift+g.
- Press **command+shift+g**
  - Type **/Library/Frameworks**
  - Click on **Go**.

6. Paste the **SDL2.framework** file that you copied from **SDL2-2.0.4.dmg**.

7. **SDL2.framework** should now be present inside **/Library/Frameworks**.

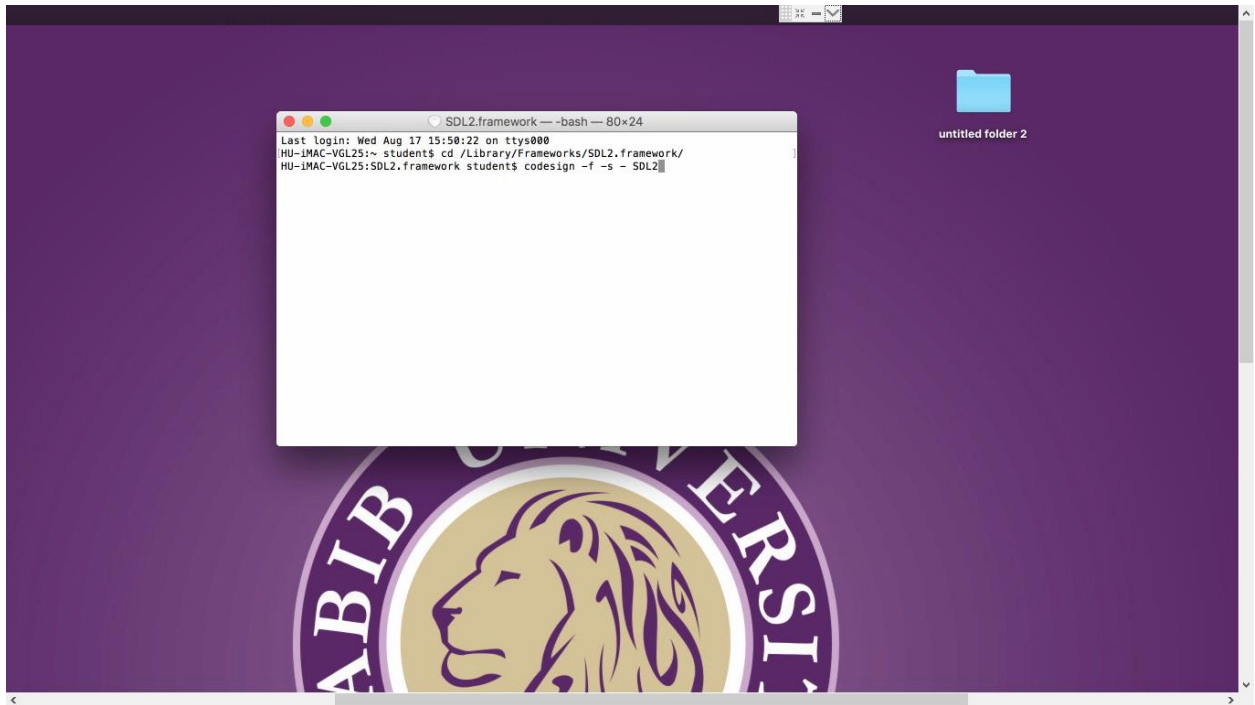

8. The framework may need to be resigned.

To sign the framework, open up a **terminal** to **/Library/Frameworks/SDL2.framework/** by typing on the terminal:

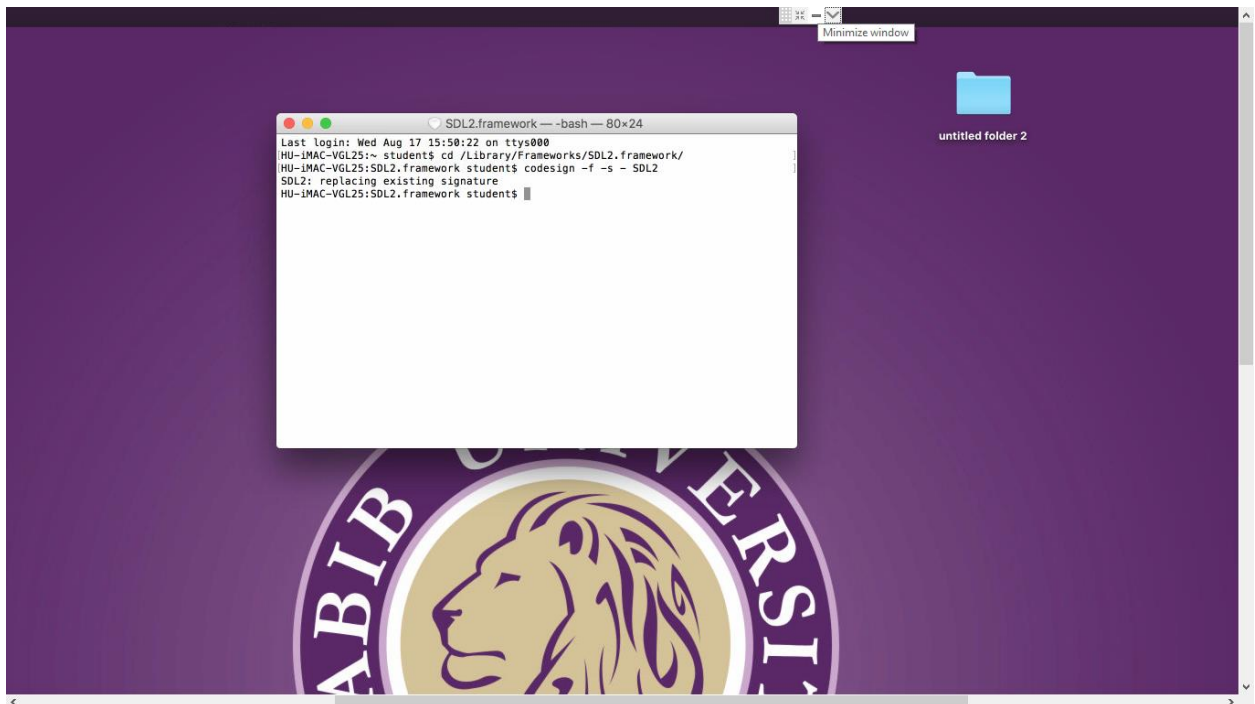

**cd /Library/Frameworks/SDL2.framework**

9. Sign the framework using the command:  
**codesign -f -s - SDL2**

10. Framework have been resigned and the SDL2 development libraries have been installed successfully!

*Congratulations! You have successfully set up SDL2 on Mac OSX Yosemite!*
